Q2 MCM-L #102 Time Famine

多选 · 评分 0 / 2

录音原文 Transcript

A team of researchers finds that shelling out for services that save time can bring greater feelings of life satisfaction than, say, simply buying more stuff. The results appear in the Proceedings of the National Academy of Sciences.

It's safe to say that most of us regularly feel crunched for time. So much so that we are experiencing what Ashley Whillans of the Harvard Business School, the lead author of the study, describes as a "time famine." And like any famine, this chronic lack of time takes its toll on our health.

"When we feel like our to-do lists are longer than the hours that we have time in the day to complete them, we can feel as if our life is spiraling out of control, thereby undermining our personal well-being."

Well, if time is money, Whillans and her team wondered whether money that's used to buy time could offer some relief. Like paying someone else to clean the house, mow the lawn, or deliver the groceries.

译 一组研究人员发现，花钱购买节省时间的服务比单纯多买东西更能带来生活满意度，该结果发表于《美国国家科学院院刊》。可以肯定地说，我们大多数人都经常感到时间紧迫，以至于我们正在经历哈佛商学院、该研究主要作者 Ashley Whillans 所描述的“时间饥荒”。和任何饥荒一样，这种长期缺乏时间会损害我们的健康。”当我们觉得待办事项清单比一天里能用来完成它们的时间还长时，我们会感觉生活正在失控，从而损害我们的个人幸福感。”如果说时间就是金钱，Whillans 和她的团队想知道，用来买时间的钱是否能带来一些缓解——比如付钱请人打扫房子、割草坪或者送杂货。

Q3 MCM-L #106 Hair

多选 · 评分 1 / 2

| 录音原文 Transcript

All mammals have hair—commonly called fur when it's on your cat or a koala. And the thickness of individual hairs varies from species to species. For example, elephant hairs are more than four times thicker than a strand from an adult human.

“Normally, when the animal is larger, the hair tends to be thicker.”

University of California, San Diego, materials scientist Wen Yang. She's interested in how biological structures like hair hold up under stress. That interest comes from a desire to design better synthetic materials.

Yang's team tested the tensile strength of hair from eight different mammal species, including humans. They subjected those hairs to increasing levels of tension until the fibers broke. The researchers assumed that thick hair—from giraffes, elephants and boars, for example—would be more robust. But they were wrong.

译 所有哺乳动物都有毛发——长在猫或考拉身上时通常叫皮毛。不同物种间单根毛发的粗细各不相同，例如象毛比成年人的一根头发粗四倍多。”通常动物越大，毛发往往越粗。”加州大学圣地亚哥分校材料科学家 Wen Yang 对生物结构（如毛发）如何承受压力很感兴趣，这一兴趣源于想要设计更好的合成材料。Yang 的团队测试了包括人类在内的八种不同哺乳动物毛发的抗拉强度，让这些毛发承受不断增加的张力，直到纤维断裂。研究人员本以为粗毛（例如长颈鹿、大象和野猪的毛）会更结实，但他们错了。

| 题目 Question

Which of the following statements about hair are correct?

| 选项 Choices（正确项绿色加粗）

A) Generally speaking, the size of an animal is directly proportional to the thickness of its hair.

B) Cats have thicker hairs than elephants.

C) The function of hairs is to protect the body.

D) Different species have different hair thickness.

E) The thick hairs on giraffes, elephants are stronger than small animals.

An important question about education is, then, why do some types of students achieve success easily and others struggle to do well? Well, one theory is that there is a ~~X generic~~ (答案: genetic) reason for academic achievement. What I mean by that is, a certain innate, measurable level of ~~X intelligent~~ (答案: intelligence). Another frequently discussed theory is environmental factors, such as the effect of home and family upbringing. A final reason is related to the teaching and learning ~~✓ process~~ within educational institutions, and the way it is organized, administered and ~~X excessed~~ (答案: assessed).

译 关于教育的一个重要问题是,为什么有些学生轻易就能取得成功,而另一些却难以做好?一种理论认为,学业成就有其遗传方面的原因,也就是说存在一种与生俱来的、可测量的智力水平。另一种常被讨论的理论是环境因素,比如家庭教养的影响。最后一个原因与教育机构内部的教与学过程,以及其组织、管理和评估的方式有关。

你的作答: generic, intelligent, process, excessed 本题得分: 1 / 4 (用时 02:17; 仅第 3 空 process 正确, 正确为 genetic / intelligence / process / assessed)

Q5 FIB-L #7 Language Learning

听力填空 (打字) · 评分 3 / 5

Learning a language in the classroom is never easy and, quite ~~X fractly~~ (答案: frankly), it's not the way that most people would choose to learn if they had other ~~X (未作答)~~ (答案: options). Having said that, there are plenty of reasons for keeping languages on the school curriculum. For one thing, a fair number of students go on to take jobs in business and commerce that require a ~~✓ basic~~ knowledge of a second language. When you talk to young ~~✓ employees~~ in top companies, it seems that they had a career plan from the start: they were motivated to find additional things to put on their CVs — and of course language is one of those added, but ~~✓ significant~~ extras.

译 在课堂上学习一门语言从来都不容易,坦率地说,如果人们还有别的选择,这并不是大多数人会选择的学习方式。话虽如此,学校课程仍保留语言课有很多理由。一方面,相当一部分学生日后会从事需要基本第二语言知识的商业岗位。当你和大公司的年轻员工交谈时,似乎他们从一开始就有职业规划:他们有动力去寻找能写进简历的附加项——语言当然就是其中之一,虽是附加项,却也是重要的加分项。

你的作答: fractly, (空), basic, employees, significant 本题得分: 3 / 5 (用时 01:29; 第 1 空 fractly→frankly, 第 2 空未作答→options)

Q6 HCS #80 Mental Health

选择最佳概括段 · 评分 1 / 1

| 录音原文 Transcript

One of the great contributing factors to mental illness is the idea that we should at all costs and at all times be well. We suffer far more than we should because of how long it can take many of us until we allow ourselves to fall properly and usefully ill. In a crisis, our chances of getting better rely to a significant extent on having the right relationship to our illness: an attitude which is relatively unfrightened by our distress, which isn't overly in love with the idea of seeming at all times 'normal', which can allow us to be deranged for a while in order one day to reach a more authentic kind of sanity. It will help us immensely in this quest if the images of mental illness we can draw on at this time do not narrowly imply that our ailment is merely a freakish and pitiable possibility, if we can appeal to images that tease out the universal and dignified themes of our state, so that we do not — on top of everything else — have to fear and hate ourselves for being unwell.

译 导致精神疾病的一大因素，是我们认为自己应当不惜一切代价、任何时候都保持健康。我们所承受的痛苦，往往远超本应承担的程度，因为许多人要花很长时间才能允许自己恰当地“生病”。在危机中，我们能否好转，在很大程度上取决于我们与自身疾病之间是否建立了正确的关系：一种不那么害怕自身痛苦的态度，一种不过分执着于时时表现“正常”的态度——这能让我们暂时“癫狂”一阵子，以便有朝一日达到一种更真实的理智状态。如果此时我们所能借助的精神疾病形象，不狭隘地暗示我们的病痛只是一种古怪而可怜的可能性，而是能借助那些揭示出我们境况中普遍而有尊严的主题的形象，那么这将极大地帮助我们完成这一追寻，让我们不至于在其他一切之外，还要因为生病而害怕、憎恨自己。

| 题目 Question

Click on the paragraph that best relates to the recording.

| 选项 Choices (正确项绿色加粗)

A) People are now living under great stress, so we are facing severe mental illness that can cost us a lot. To solve this problem, it is suggested that we have a strong relationship with others, and try our best not to fear or hate ourselves when we are feeling unwell.

B) There is no need that we should feel well all the time: we can feel disappointed or upset sometimes. We need to find the right relationship with our illness so that it does not cause us too much concern. So we don't necessarily fear or hate it when we feel unwell.

C) A freakish and pitiable possibility is that when we are feeling unwell, we are more likely to get deranged. Then, our mind allows us to be more worried and afraid. How bad this situation is largely depends on whether we can reach a more authentic kind of sanity or not.

D) The idea that we should at all costs and at all times be well alleviates our mental illness. Although we can feel deranged occasionally, this is not a normal state. Feeling ill is not proper, useful or dignified, so it implies that we need to rely on a right relationship to deal with it.

Q7 HCS #81 What Democracy Breeds

选择最佳概括段 · 评分 0 / 1

| 录音原文 Transcript

In a chapter of Democracy in America entitled why the Americans are often so restless in the midst of their prosperity? De Tocqueville sketched an enduring analysis of the relationship between high expectations and dissatisfaction between political equality and envy. He wrote, when all the prerogatives of birth and fortune have been abolished, when every profession is open to everyone, an ambitious man may think it is easy to launch himself on a great career, and feel that he has been called to no common destiny. But this is a delusion which experience quickly corrects. When inequality is the general rule in society the greatest inequalities attract no attention. But when everything is more or less level, the slightest variation is noticed. That is the reason for the strange melancholy often haunting inhabitants of democracies in the midst of abundance, and of that disgust with life sometimes gripping them even in calm and easy circumstances.

译 在《论美国的民主》中题为“美国人为何常常在繁荣中焦躁不安”的一章里，托克维尔对高期望与不满、政治平等与嫉妒之间的关系作了历久弥新的分析。他写道，当出身和财富的一切特权都被废除、当人人都能从事任何职业时，一个雄心勃勃的人可能会认为轻而易举就能开创一番伟大事业，觉得自己被赋予了非凡的命运；但这是一种幻觉，经验很快会纠正它。当不平等是社会普遍规则时，最大的不平等也不会引人注目；但当一切大致趋于平等时，最微小的差异都会被察觉。这正是民主国家的居民即便身处富足，也常常被一种奇怪的忧郁困扰，甚至在平静安逸的环境中也会被那种对生活的厌恶所攫住的原因。

| 选项 Choices (正确项绿色加粗)

A) To launch oneself on a great career, a person needs to be very ambitious and insightful. Even in the calm and easy circumstance, he or she has to pay attention to even the slightest variation in the market, which changes fast in the modern era.

B) What is haunting inhabitants of democracies is dissatisfaction of political inequality. The Americans will not feel melancholy until all the prerogatives of birth and fortune have been abolished. They will feel safer and happier when everything is more or less level.

C) In the midst of their prosperity, every profession is open to every American. People do not have to envy each other, and they believe a completely equal society is no more a delusion. But people with higher expectations tend to feel more disappointed with life.

D) By analyzing political equality and envy and expectations and dissatisfaction, De Tocqueville mentioned that when everyone is living in a basically equal environment, even the slightest inequality will be noticed. This is the reason that the Americans are often restless even in a cozy circumstance.

Q8 MCS-L #123 Parties

单选 · 评分 1 / 1

| 录音原文 Transcript

Since 1852, every US president has been a member of one of the country's two major political parties, the Republican party or the Democratic party. Democrats generally support higher taxes, so they can fund more government programs. Republicans generally prefer lower taxes and smaller government. These two parties tend to reflect relatively moderate political views.

But there are several other smaller parties on the fringes, including the Libertarian, Constitution, Socialist or Green Parties. Or you can just be an independent not affiliated with any party. Third parties are not that big. But they can have a major influence on presidential elections, by taking away votes from the two major party candidates, which in some years can be a deciding factor in the race to become president.

Management requires a great deal of energy and effort more than most people care to make. One factor that affects managers and inhibits their capacity to provide leadership is stress. Stress has lots of causes, work overload, criticism from workers, and can have negative health effects, including loss of sleep. It's a fact: managers have to deal with stress. Some handle it by making time to be by themselves. Most have some favorite place or pastime, a beach to walk on, maybe a stream to fish in or a game to play with the kids. It's important to have some form of rest and relaxation, creating art, working with your hands, gardening, playing sports. The list goes on. Rest doesn't always mean inactivity. For some people exercise _____

Q11 HIW #216 T Cell

找错词 · 评分 4 / 4

■ 屏幕文字（错词见下划线，括注实际读音）

Shhh, keep this podcast a secret. Because new research points to a sculptural (听:possible) blind spot in airport security screening: it may be easier to sneak something dangerous past security-a box cutter, for example-by also including an obvious and mongooses (听:innocuous) banned object, like a water bottle, into the mix as a distraction.

Scientists recruited college duennas (听:students) to find targets on a computer display. Their task: search for lines that formed a T amidst other non-T lines in 10 different experiments. Sometimes the Ts were easy to find, sometimes they were more hidden. When the easy and tough ones appeared with equal frequency, the students found both on the same screen. When the easy T's appeared two to three times more frequently, the students were more likely to miss the tough ones. But when the students were given extra time, lessening the pressure, they were more able to find both targets almost as quickly.

The study suggests that actual professional kneaders (听:screeners) need to be just as vigilant in their attention after finding a first piece of contraband in a given bag. And keeping their stress levels as low as possible should help their performance.

译 嘘，把这期播客保密。因为新研究指出机场安检可能存在一个盲点：混入危险物品（比如美工刀）可能更容易得手，只要同时放入一个明显但无害的违禁物（比如水瓶）作为干扰。科学家招募了大学生，让他们在电脑屏幕上找目标：在 10 组不同实验中，从其他非 T 形线条里找出组成字母 T 的线条。有时候 T 很容易找，有时候更难找。当难易目标出现频率相当时，学生能在同一屏幕上都找到；当容易的 T 出现频率是难的两三倍时，学生更容易漏掉难的那些。但当给学生更多时间、减轻压力后，他们几乎能同样快地找到两种目标。研究表明，真正的专业安检员在包里找到第一件违禁品后，仍需保持同样警觉的注意力；尽量降低压力水平应有助于提升他们的表现。

Q12 HIW #179 Bone and Weight

找错词 · 评分 4 / 5

■ 屏幕文字（错词见下划线，括注实际读音）

Some dinosaurs were really huge. And now we may have a better way to envelopment (听:estimate) just how heavy these giants were. Researchers have developed a method to weigh dinosaurs, based on laser scans of their skeletons. The study is in the journal Biology Letters.

Looking at a bare human skeleton, how would you guess whether its owner was chubby or svelte? If you calculated how much space the fully-fleshed body occupied, you could codify (听:multiply) that volume by tissue density to find the weight.

Researchers laser-scanned 14 modern mammal skeletons to create digital models of each body. These 3-D models were unrealistically scrawny, with skin dismissed (听:stretched) tight over the bones. But their undersized volumes were consistent, measuring in as 21 percent less than the actual animals.

Based on this information, reasoners (听:researchers) scanned Giraffatitan bones, added 21 percent to the digital model's volume, and then calculated the dinosaur's weight: about 51,000 pounds. The technique could become the insomuch (听:preferred) way to estimate mass based on skeletons, improving our understanding of how extinct species lived and moved. And helping paleontologists make earth-shaking discoveries.

译 有些恐龙体型非常庞大，如今我们也许有了更好的办法来估算这些庞然大物的体重。研究人员基于骨骼的激光扫描开发出一种给恐龙称重的方法，该研究发表于《生物学快报》。看着一具裸露的人类骨架，你要怎么猜它的主人是胖是瘦？如果你计算出完全长满血肉的身体所占的空间，就可以用体积乘以组织密度来求出体重。研究人员对 14 具现代哺乳动物骨骼进行激光扫描，建立了每个身体的数字模型；这些三维模型都不真实地瘦削，皮肤紧绷在骨骼上，但它们体积不足的比例是一致的，都比实际动物少约 21%。基于这一信息，研究人员对腕龙属（Giraffatitan）的骨骼进行扫描，给数字模型体积增加 21%，再计算出这只恐龙的体重：约 51,000 磅。这项技术有望成为基于骨骼估算体重的首选方法，有助于我们理解已灭绝物种如何生活和行动，并帮助古生物学家做出惊天动地的发现。
