Q2 MCM-L #102 Time Famine

多选 · 评分 0 / 2

录音原文 Transcript

A team of researchers finds that shelling out for services that save time can bring greater feelings of life satisfaction than, say, simply buying more stuff. The results appear in the Proceedings of the National Academy of Sciences.

It's safe to say that most of us regularly feel crunched for time. So much so that we are experiencing what Ashley Whillans of the Harvard Business School, the lead author of the study, describes as a "time famine." And like any famine, this chronic lack of time takes its toll on our health.

"When we feel like our to-do lists are longer than the hours that we have time in the day to complete them, we can feel as if our life is spiraling out of control, thereby undermining our personal well-being."

Well, if time is money, Whillans and her team wondered whether money that's used to buy time could offer some relief. Like paying someone else to clean the house, mow the lawn, or deliver the groceries.

译 一组研究人员发现，花钱购买节省时间的服务比单纯多买东西更能带来生活满意度，该结果发表于《美国国家科学院院刊》。可以肯定地说，我们大多数人都经常感到时间紧迫，以至于我们正在经历哈佛商学院、该研究主要作者 Ashley Whillans 所描述的“时间饥荒”。和任何饥荒一样，这种长期缺乏时间会损害我们的健康。”当我们觉得待办事项清单比一天里能用来完成它们的时间还长时，我们会感觉生活正在失控，从而损害我们的个人幸福感。”如果说时间就是金钱，Whillans 和她的团队想知道，用来买时间的钱是否能带来一些缓解——比如付钱请人打扫房子、割草坪或者送杂货。

Q3 MCM-L #106 Hair

多选 · 评分 1 / 2

| 录音原文 Transcript

All mammals have hair—commonly called fur when it's on your cat or a koala. And the thickness of individual hairs varies from species to species. For example, elephant hairs are more than four times thicker than a strand from an adult human.

“Normally, when the animal is larger, the hair tends to be thicker.”

University of California, San Diego, materials scientist Wen Yang. She's interested in how biological structures like hair hold up under stress. That interest comes from a desire to design better synthetic materials.

Yang's team tested the tensile strength of hair from eight different mammal species, including humans. They subjected those hairs to increasing levels of tension until the fibers broke. The researchers assumed that thick hair—from giraffes, elephants and boars, for example—would be more robust. But they were wrong.

An important question about education is, then, why do some types of students achieve success easily and others struggle to do well? Well, one theory is that there is a ~~X generic~~ (答案: genetic) reason for academic achievement. What I mean by that is, a certain innate, measurable level of ~~X intelligent~~ (答案: intelligence). Another frequently discussed theory is environmental factors, such as the effect of home and family upbringing. A final reason is related to the teaching and learning ~~✓ process~~ within educational institutions, and the way it is organized, administered and ~~X excessed~~ (答案: assessed).

译 关于教育的一个重要问题是，为什么有些学生轻易就能取得成功，而另一些却难以做好？一种理论认为，学业成就有其遗传方面的原因，也就是说存在一种与生俱来的、可测量的智力水平。另一种常被讨论的理论是环境因素，比如家庭教养的影响。最后一个原因与教育机构内部的教与学过程，以及其组织、管理和评估的方式有关。

你的作答： generic, intelligent, process, excessed **本题得分：** 1 / 4 (用时 02:17; 仅第 3 空 process 正确，正确为 genetic / intelligence / process / assessed)

Q5 FIB-L #7 Language Learning

Learning a language in the classroom is never easy and, quite ~~X fractly~~ (答案: frankly), it's not the way that most people would choose to learn if they had other ~~X (未作答)~~ (答案: options). Having said that, there are plenty of reasons for keeping languages on the school curriculum. For one thing, a fair number of students go on to take jobs in business and commerce that require a ~~✓ basic~~ knowledge of a second language. When you talk to young ~~✓ employees~~ in top companies, it seems that they had a career plan from the start: they were motivated to find additional things to put on their CVs — and of course language is one of those added, but ~~✓ significant~~ extras.

译 在课堂上学习一门语言从来都不容易，坦率地说，如果人们还有别的选择，这并不是大多数人会选择的学习方式。话虽如此，学校课程仍保留语言课有很多理由。一方面，相当一部分学生日后会从事需要基本第二语言知识的商业岗位。当你和大公司的年轻员工交谈时，似乎他们从一开始就有职业规划：他们有动力去寻找能写进简历的附加项——语言当然就是其中之一，虽是附加项，却也是重要的加分项。

你的作答： fractly, (空), basic, employees, significant **本题得分：** 3 / 5 (用时 01:29; 第 1 空 fractly → frankly, 第 2 空未作答 → options)

Q6 HCS #80 Mental Health

选择最佳概括段 · 评分 1 / 1

| 录音原文 Transcript

One of the great contributing factors to mental illness is the idea that we should at all costs and at all times be well. We suffer far more than we should because of how long it can take many of us until we allow ourselves to fall properly and usefully ill. In a crisis, our chances of getting better rely to a significant extent on having the right relationship to our illness: an attitude which is relatively unfrightened by our distress, which isn't overly in love with the idea of seeming at all times 'normal', which can allow us to be deranged for a while in order one day to reach a more authentic kind of sanity. It will help us immensely in this quest if the images of mental illness we can draw on at this time do not narrowly imply that our ailment is merely a freakish and pitiable possibility, if we can appeal to images that tease out the universal and dignified themes of our state, so that we do not — on top of everything else — have to fear and hate ourselves for being unwell.

译 导致精神疾病的一大因素，是我们认为自己应当不惜一切代价、任何时候都保持健康。我们所承受的痛苦，往往远超本应承担的程度，因为许多人要花很长时间才能允许自己恰当地“生病”。在危机中，我们能否好转，在很大程度上取决于我们与自身疾病之间是否建立了正确的关系：一种不那么害怕自身痛苦的态度，一种不过分执着于时时表现“正常”的态度——这能让我们暂时“癫狂”一阵子，以便有朝一日达到一种更真实的理智状态。如果此时我们所能借助的精神疾病形象，不狭隘地暗示我们的病痛只是一种古怪而可怜的可能性，而是能借助那些揭示出我们境况中普遍而有尊严的主题的形象，那么这将极大地帮助我们完成这一追寻，让我们不至于在其他一切之外，还要因为生病而害怕、憎恨自己。

| 题目 Question

Click on the paragraph that best relates to the recording.

| 选项 Choices (正确项绿色加粗)

A) People are now living under great stress, so we are facing severe mental illness that can cost us a lot. To solve this problem, it is suggested that we have a strong relationship with others, and try our best not to fear or hate ourselves when we are feeling unwell.

B) There is no need that we should feel well all the time: we can feel disappointed or upset sometimes. We need to find the right relationship with our illness so that it does not cause us too much concern. So we don't necessarily fear or hate it when we feel unwell.

C) A freakish and pitiable possibility is that when we are feeling unwell, we are more likely to get deranged. Then, our mind allows us to be more worried and afraid. How bad this situation is largely depends on whether we can reach a more authentic kind of sanity or not.

D) The idea that we should at all costs and at all times be well alleviates our mental illness. Although we can feel deranged occasionally, this is not a normal state. Feeling ill is not proper, useful or dignified, so it implies that we need to rely on a right relationship to deal with it.

Q7 HCS #81 What Democracy Breeds

选择最佳概括段 · 评分 0 / 1

| 录音原文 Transcript

In a chapter of Democracy in America entitled why the Americans are often so restless in the midst of their prosperity? De Tocqueville sketched an enduring analysis of the relationship between high expectations and dissatisfaction between political equality and envy. He wrote, when all the prerogatives of birth and fortune have been abolished, when every profession is open to everyone, an ambitious man may think it is easy to launch himself on a great career, and feel that he has been called to no common destiny. But this is a delusion which experience quickly corrects. When inequality is the general rule in society the greatest inequalities attract no attention. But when everything is more or less level, the slightest variation is noticed. That is the reason for the strange melancholy often haunting inhabitants of democracies in the midst of abundance, and of that disgust with life sometimes gripping them even in calm and easy circumstances.

译 在《论美国的民主》中题为“美国人为何常常在繁荣中焦躁不安”的一章里，托克维尔对高期望与不满、政治平等与嫉妒之间的关系作了历久弥新的分析。他写道，当出身和财富的一切特权都被废除、当人人都能从事任何职业时，一个雄心勃勃的人可能会认为轻而易举就能开创一番伟大事业，觉得自己被赋予了非凡的命运；但这是一种幻觉，经验很快会纠正它。当不平等是社会普遍规则时，最大的不平等也不会引人注目；但当一切大致趋于平等时，最微小的差异都会被察觉。这正是民主国家的居民即便身处富足，也常常被一种奇怪的忧郁困扰，甚至在平静安逸的环境中也会被那种对生活的厌恶所攫住的原因。

| 选项 Choices (正确项绿色加粗)

A) To launch oneself on a great career, a person needs to be very ambitious and insightful. Even in the calm and easy circumstance, he or she has to pay attention to even the slightest variation in the market, which changes fast in the modern era.

B) What is haunting inhabitants of democracies is dissatisfaction of political inequality. The Americans will not feel melancholy until all the prerogatives of birth and fortune have been abolished. They will feel safer and happier when everything is more or less level.

C) In the midst of their prosperity, every profession is open to every American. People do not have to envy each other, and they believe a completely equal society is no more a delusion. But people with higher expectations tend to feel more disappointed with life.

D) By analyzing political equality and envy and expectations and dissatisfaction, De Tocqueville mentioned that when everyone is living in a basically equal environment, even the slightest inequality will be noticed. This is the reason that the Americans are often restless even in a cozy circumstance.

Q8 MCS-L #123 Parties

单选 · 评分 1 / 1

| 录音原文 Transcript

Since 1852, every US president has been a member of one of the country's two major political parties, the Republican party or the Democratic party. Democrats generally support higher taxes, so they can fund more government programs. Republicans generally prefer lower taxes and smaller government. These two parties tend to reflect relatively moderate political views.

But there are several other smaller parties on the fringes, including the Libertarian, Constitution, Socialist or Green Parties. Or you can just be an independent not affiliated with any party. Third parties are not that big. But they can have a major influence on presidential elections, by taking away votes from the two major party candidates, which in some years can be a deciding factor in the race to become president.

Management requires a great deal of energy and effort more than most people care to make. One factor that affects managers and inhibits their capacity to provide leadership is stress. Stress has lots of causes, work overload, criticism from workers, and can have negative health effects, including loss of sleep. It's a fact: managers have to deal with stress. Some handle it by making time to be by themselves. Most have some favorite place or pastime, a beach to walk on, maybe a stream to fish in or a game to play with the kids. It's important to have some form of rest and relaxation, creating art, working with your hands, gardening, playing sports. The list goes on. Rest doesn't always mean inactivity. Q11 HIW #216 T Cell

找错词 · 评分 4 / 4

■ 屏幕文字（错词见下划线，括注实际读音）

Shhh, keep this podcast a secret. Because new research points to a sculptural (听:possible) blind spot in airport security screening: it may be easier to sneak something dangerous past security-a box cutter, for example-by also including an obvious and mongooses (听:innocuous) banned object, like a water bottle, into the mix as a distraction.

Scientists recruited college duennas (听:students) to find targets on a computer display. Their task: search for lines that formed a T amidst other non-T lines in 10 different experiments. Sometimes the Ts were easy to find, sometimes they were more hidden. When the easy and tough ones appeared with equal frequency, the students found both on the same screen. When the easy T's appeared two to three times more frequently, the students were more likely to miss the tough ones. But when the students were given extra time, lessening the pressure, they were more able to find both targets almost as quickly.

The study suggests that actual professional kneaders (听:screeners) need to be just as vigilant in their attention after finding a first piece of contraband in a given bag. And keeping their stress levels as low as possible should help their performance.

译 嘘，把这期播客保密。因为新研究指出机场安检可能存在一个盲点：混入危险物品（比如美工刀）可能更容易得手，只要同时放入一个明显但无害的违禁物（比如水瓶）作为干扰。科学家招募了大学生，让他们在电脑屏幕上找目标：在 10 组不同实验中，从其他非 T 形线条里找出组成字母 T 的线条。有时候 T 很容易找，有时候更难找。当难易目标出现频率相当时，学生能在同一屏幕上都找到；当容易的 T 出现频率是难的两三倍时，学生更容易漏掉难的那些。但当给学生更多时间、减轻压力后，他们几乎能同样快地找到两种目标。研究表明，真正的专业安检员在包里找到第一件违禁品后，仍需保持同样警觉的注意力；尽量降低压力水平应有助于提升他们的表现。

Q12 HIW #179 Bone and Weight

找错词 · 评分 4 / 5

■ 屏幕文字（错词见下划线，括注实际读音）

Some dinosaurs were really huge. And now we may have a better way to envelopment (听:estimate) just how heavy these giants were. Researchers have developed a method to weigh dinosaurs, based on laser scans of their skeletons. The study is in the journal Biology Letters.

Looking at a bare human skeleton, how would you guess whether its owner was chubby or svelte? If you calculated how much space the fully-fleshed body occupied, you could codify (听:multiply) that volume by tissue density to find the weight.

Researchers laser-scanned 14 modern mammal skeletons to create digital models of each body. These 3-D models were unrealistically scrawny, with skin dismissed (听:stretched) tight over the bones. But their undersized volumes were consistent, measuring in as 21 percent less than the actual animals.

Based on this information, reasoners (听:researchers) scanned Giraffatitan bones, added 21 percent to the digital model's volume, and then calculated the dinosaur's weight: about 51,000 pounds. The technique could become the insomuch (听:preferred) way to estimate mass based on skeletons, improving our understanding of how extinct species lived and moved. And helping paleontologists make earth-shaking discoveries.

译 有些恐龙体型非常庞大，如今我们也许有了更好的办法来估算这些庞然大物的体重。研究人员基于骨骼的激光扫描开发出一种给恐龙称重的方法，该研究发表于《生物学快报》。看着一具裸露的人类骨架，你要怎么猜它的主人是胖是瘦？如果你计算出完全长满血肉的身体所占的空间，就可以用体积乘以组织密度来求出体重。研究人员对 14 具现代哺乳动物骨骼进行激光扫描，建立了每个身体的数字模型；这些三维模型都不真实地瘦削，皮肤紧绷在骨骼上，但它们体积不足的比例是一致的，都比实际动物少约 21%。基于这一信息，研究人员对腕龙属（Giraffatitan）的骨骼进行扫描，给数字模型体积增加 21%，再计算出这只恐龙的体重：约 51,000 磅。这项技术有望成为基于骨骼估算体重的首选方法，有助于我们理解已灭绝物种如何生活和行动，并帮助古生物学家做出惊天动地的发现。

The farm was founded by John Hume, who wanted to **✓ breed** rhinos and sell their horns, but ran out of money. African Parks saw the opportunity to save the rhinos and use them to rebuild populations that have been decimated by poaching. Poaching is driven by the demand for rhino horn in some parts of Asia, where it is used in traditional medicine and as a status symbol. The charity hopes to transfer all the rhinos **✓ from** the farm to secure and sustainable locations in the next 10 years. This would be one of the most ambitious animal rewilding projects ever **✓ undertaken**, and could secure the future of the white rhino in Africa.

译 南非一座秘密农场是 2,000 头白犀牛的家園，这是世界上最大的犀牛种群之一。该农场最近被保护慈善机构 African Parks 收购，计划让犀牛重新野化，并把它们放归到非洲各地的自然栖息地。农场由 John Hume 创建，他本想繁育犀牛并出售牛角，却资金耗尽。African Parks 抓住机会拯救这些犀牛，并用它们来重建因偷猎而锐减的种群。偷猎源于亚洲部分地区对犀牛角的需求，那里把它用作传统药材和身份象征。该慈善机构希望在未来 10 年内把所有犀牛从农场转移到安全、可持续的地点。这将是自有史以来最雄心勃勃的动物野化项目之一，并可能确保非洲白犀牛的未來。

选项 Choices (每空 4 选 1, 正确项加粗)

1. ecosystem, **home**, reserve, guardian
2. detach, expel, **restore**, withdraw
3. covet, **breed**, disguise, dismantle
4. **from**, away, until, toward
5. bypassed, **undertaken**, overestimated, emigrated

解析 Explanation (编者补注)

1. **home** be home to”是……的栖息地/家园”，固定表达；reserve”保护区”语义与句式不合。
2. **restore** restore sb to somewhere”使……回归到”；与 rewild、natural habitats 语义一致。detach”使分离”相反，故你的答案错。
3. **breed** wanted to breed rhinos and sell their horns”繁育犀牛并卖角”，breed 最贴切。
4. **from** transfer all the rhinos from the farm to ...”从农场转移到……”，from...to 结构。
5. **undertaken** projects ever undertaken”曾开展过的项目”，被动完成式修饰 projects。

你的答案: **reserve, detach, breed, from, undertaken** 本题得分: **3 / 5** (用时 02:39; 第 1 空 reserve→home、第 2 空 detach→restore)

Q6 MCM-R #23

多选 · 评分 0 / 2

注: 原图标题处仅重复显示题型"MCM-R", 无独立标题; 下文按内容暂记为"Psychodynamic Approach"。

文章 Passage

The Psychodynamic Approach. Theorists adopting the psychodynamic approach hold that inner conflicts are crucial for understanding human behavior, including aggression. Sigmund Freud, for example, believed that aggressive impulses are inevitable reactions to the frustrations of daily life. Children normally desire to vent aggressive impulses on other people, including their parents, because even the most attentive parents cannot gratify all of their demands immediately. Yet children, also fearing their parents' punishment and the loss of parental love, come to repress most aggressive impulses. The Freudian perspective, in a sense: sees us as "steam engines." By holding in rather than venting "steam," we set the stage for future explosions. Pent-up aggressive impulses demand outlets. They may be expressed toward parents in indirect ways such as destroying furniture, or they may be expressed toward strangers later in life.

译 心理动力学取向。采用心理动力学取向的理论家认为, 内在冲突对于理解人类行为 (包括攻击性) 至关重要。例如, 弗洛伊德认为, 攻击性冲动是对日常生活挫折不可避免的反应。儿童通常渴望把攻击性冲动发泄到他人身上, 包括父母, 因为即使最细心的父母也无法立即满足他们的一切要求。然而, 儿童同时害怕父母的惩罚以及失去父母之爱, 于是逐渐压抑大多数攻击性冲动。从某种意义上说, 弗洛伊德的观点把我们看作"蒸汽机": 通过憋住而非释放"蒸汽", 我们为将来的爆发埋下伏笔。被压抑的攻击性冲动需要出口, 它们可能以间接方式发泄到父母身上 (如破坏家具), 也可能在日后发泄到陌生人身上。

Q7 MCM-R #34 Paintings

多选 · 评分 **0 / 2**

文章 Passage

A third opinion takes psychological motivation much further into the realm of tribal ceremonies and mystery: the belief that certain animals assumed mythical significance as ancient ancestors or protectors of a given tribe or clan. Two types of images substantiate this theory: the strange, indecipherable geometric shapes that appear near some animals, and the few drawings of men. Wherever men appear they are crudely drawn and their bodies are elongated and rigid. Some men are in a prone position and some have bird or animal heads. Advocates for this opinion point to reports from people who have experienced a trance state, a highly suggestive state of low consciousness between waking and sleeping. Uniformly, these people experienced weightlessness and the sensation that their bodies were being stretched lengthwise. Advocates also point to people who believe that the forces of nature are inhabited by spirits, particularly shamans who believe that an animal's spirit and energy is transferred to them while in a trance. One Lascaux narrative picture, which shows a man with a birdlike head and a wounded animal, would seem to lend credence to this third opinion, but there is still much that remains unexplained. For example, where is the proof that the man in the picture is a shaman? He could as easily be a hunter wearing a headmask. Many tribal hunters, including some Native Americans, camouflaged themselves by wearing animal heads and hides.

译 第三种观点把心理动机进一步引向部落仪式与神秘领域:即认为某些动物作为特定部落或氏族的远古祖先或守护者,具有神话意义。两类图像佐证了这一理论:出现在某些动物旁边的奇异、难以解读的几何图形,以及少数人物画。凡有人物出现,都画得粗糙,身体被拉长且僵硬;有些人呈俯卧姿势,有些则长着鸟或动物的头。该观点的支持者援引了经历过“入迷状态”者的描述——那是一种介于清醒与睡眠之间、高度受暗示、意识低下的状态。这些人无一例外地体验到失重感,以及身体被纵向拉长的感觉。支持者还援引那些相信自然力量由精灵栖居的人,尤其是萨满——他们相信在入迷状态下,动物的灵魂与能量会转移到自己身上。拉斯科的一幅叙事性壁画描绘了一个长着鸟头的人和一头受伤的动物,似乎为第三种观点提供了佐证,但仍有许多未解之处。例如,凭什么证明画中人 是萨满?他也完全可能是戴着头面具的猎人。许多部落猎人,包括一些北美原住民,都会披戴兽头兽皮来伪装自己。

题目 Question

Q14 MCS-R #45

单选 · 评分 1 / 1

注：原图标题处仅重复显示题型"MCS-R"，无独立标题；下文按内容暂记为"Native American Renaissance"。

文章 Passage

The outpouring of contemporary American Indian literature in the last two decades, often called the Native American Renaissance, represents for many the first opportunity to experience Native American poetry. The appreciation of traditional oral American Indian literature has been limited, hampered by poor translations and by the difficulty, even in the rare culturally sensitive and aesthetically satisfying translation, of completely conveying the original's verse structure, tone, and syntax. By writing in English and experimenting with European literary forms, contemporary American Indian writers have broadened their potential audience, while clearly retaining many essential characteristics of their ancestral oral traditions. For example, Pulitzer-prizewinning author N. Scott Momaday's poetry often treats art and mortality in a manner that recalls British romantic poetry, while his poetic response to the power of natural forces recalls Cherokee oral literature. In the same way, his novels, an art form European in origin, display an eloquence that echoes the oratorical grandeur of the great nineteenth-century American Indian chiefs.

译 近二十年来当代美洲印第安文学的大量涌现，常被称为“美洲原住民文艺复兴”，对许多人而言，这是首次体验美洲原住民诗歌的机会。人们对传统口传印第安文学的欣赏一直有限，既受制于拙劣的翻译，也因为即便是罕见的、兼具文化敏感度与美学感染力的译本，也难以完整传达原作的诗律结构、语气与句法。通过用英语写作并尝试欧洲文学形式，当代印第安作家拓宽了潜在读者群，同时又清晰地保留了祖先口传传统的诸多本质特征。例如，普利策奖得主 N. Scott Momaday 的诗歌常以令人想起英国浪漫主义诗歌的方式处理艺术与死亡，而他对自然力量的诗意回应则让人想起切罗基口传文学。同样，他那源自欧洲艺术形式的小说，展现出一种雄辩之力，呼应着 19 世纪伟大的美洲印第安酋长们的演说气魄。

Q15 MCS-R #38

单选 · 评分 0 / 1

注：原图标题处仅重复显示题型“MCS-R”，无独立标题；下文按内容暂记为“Pinnipeds' Flippers”。

文章 Passage

Biologists have long maintained that two groups of pinnipeds, sea lions and walruses, are descended from a terrestrial bearlike animal, whereas the remaining group, seals, shares an ancestor with weasels. But the recent discovery of detailed similarities in the skeletal structure of the flippers in all three groups undermines the attempt to explain away superficial resemblance as due to convergent evolution—the independent development of similarities between unrelated groups in response to similar environmental pressures. Flippers may indeed be a necessary response to aquatic life; turtles, whales, and dugongs also have them. But the common detailed design found among the pinnipeds probably indicates a common ancestor. Moreover, walruses and seals drive themselves through the water with thrusts of their hind flippers, but sea lions use their front flippers. If anatomical similarity in the flippers resulted from similar environmental pressures, as posited by the convergent evolution theory, one would expect walruses and seals, but not seals and sea lions, to have similar flippers.

译 长期以来，生物学家认为两类鳍足动物——海狮和海象——是从一种陆生的熊状动物演化而来，而其余一类海豹则与黄鼠狼共有一个祖先。但最近发现，三类动物鳍肢骨骼结构存在细致的相似之处，这动摇了把表面相似解释为“趋同进化”（即无亲缘关系的类群为应对相似的环境压力而各自独立发展出相似特征）的企图。鳍肢或许确实是对水生生活的必要适应；海龟、鲸和儒艮也都有鳍。但鳍足动物之间共有的这种细致构造，很可能表明它们有共同祖先。此外，海象和海豹靠后鳍推水前进，而海狮则用前鳍。若鳍肢的解剖学相似确如趋同进化理论所设想的那样源于相似的环境压力，那么人们应当预期海象与海豹（而非海豹与海狮）拥有相似的鳍肢。
